# **Basics 3 – Pointers**

# **Student Information**

Integrity Policy: All university integrity and class syllabus policies have been followed. I have neither given, nor received, nor have I tolerated others' use of unauthorized aid.

I understand and followed these policies: Yes No

Name:

Date:

#### Submission Details

Final *Changelist* number:

Verified build: Yes No

Number Tests Passed:

**Required Configurations:** 

Discussion (What did you learn):

### Verify Builds

- Follow the Piazza procedure on submission
  - o Verify your submission compiles and works at the changelist number.
- Verify that only MINIMUM files are submitted
  - No Generated files
    - \*.pdb, \*.suo, \*.sdf, \*.user, \*.obj, \*.exe, \*.log, \*.pdb, \*.db, \*.user
    - Anything that is generated by the compiler should not be included
  - No Generated directories
    - /Debug, /Release, /Log, /ipch, /.vs
- Typical files project files that are required
  - o \*.sln, \*.cpp, \*.h
  - o \*.vcxproj, \*.vcxproj.filters, CleanMe.bat

#### Standard Rules

### **Submit multiple times to Perforce**

- Submit your work as you go to perforce several times (at least 5)
  - o As soon as you get something working, submit to perforce
  - o Have reasonable check-in comments
    - Points will be deducted if minimum is not reached

### Write all programs in cross-platform C++

- Optimize for execution speed and robustness
- Working code doesn't mean full credit

#### **Submission Report**

- Fill out the submission Report
  - o No report, no grade

### Code and project needs to compile and run

- Make sure that your program compiles and runs
  - Warning level ALL ...
  - o NO Warnings or ERRORS
    - Your code should be squeaky clean.
  - Code needs to work "as-is".
    - No modifications to files or deleting files necessary to compile or run.
  - o All your code must compile from perforce with no modifications.
    - Otherwise it's a 0, no exceptions

### Project needs to run to completion

- If it crashes for any reason...
  - o It will not be graded and you get a 0

#### **No Containers**

- NO STL allowed {Vector, Lists, Sets, etc...}
  - o No automatic containers or arrays
  - You need to do this the old fashion way YOU EARNED IT

#### **Leave Project Settings**

- Do NOT change the project or warning level
  - o Any changing of level or suppression of warnings is an integrity issue

#### Simple C++

- No modern C++
  - o No Lambdas, Autos, templates, etc...
  - o No Boost
- NO Streams
  - o Used fopen, fread, fwrite...
- No code in MACROS
  - o Code needs to be in cpp files to see and debug it easy
- Exception:
  - o implicit problem needs templates

### **Leaking Memory**

- If the program leaks memory
  - o There is a deduction of 20% of grade
- If a class creates an object using new/malloc
  - o It is responsible for its deletion
- Any MEMORY dynamically allocated that isn't freed up is LEAKING
  - o Leaking is *HORRIBLE*, so you lose points

### No Debug code or files disabled

- Make sure the program is returned to the original state
  - o If you added debug code, please return to original state
- If you disabled file, you need to re-enable the files
  - o All files must be active to get credit.
  - o Better to lose points for unit tests than to disable and lose all points

#### No Adding files to this project

- This project will work "as-is" do not add files...
- Grading system will overwrite project settings and will ignore any student's added files and will returned program to the original state

#### UnitTestConfiguration file (if provided) needs to be set by user

- Grading will be on the UnitTestConfiguration settings
  - o Please explicitly set which tests you want graded... no regrading if set incorrectly

### **Due Dates**

- See Piazza for due date and time
- Submit program perforce in your student directory assignment supplied.
- Fill out your this <u>Submission Report</u> and commit to perforce
  - o **ONLY** use Adobe Reader to fill out form, all others will be rejected.
  - o Fill out the form and discussion for full credit.

#### Goals

- C++ pointers
  - Saving the world one dereference at a time.
  - o Increasing C++ knowledge and understanding

## Assignments

- General:
  - Add code to the body of the functions:
    - Students PointerWalk()
    - Students\_Casting()
  - o Run the Unit Tests to verify progress / success
    - 5/5 is the best for this program
- Students\_PointerWalk()
  - o Code up the pointer test from class (See Below)
    - Literally, type in the exam!
      - Copy the C++ code of the pointer test into the file
      - No hard code answers... just the test
    - Then step through the code
      - Look at the debug windows
      - Look at the memory window
    - Verify with break points and memory windows
      - This is for your benefit.
        - o Please do so...
  - o This is for you to SEE the code and understand the pointer accessing

- Students\_Casting()
  - o Understand the three structures, Cat, Bird, and Dog.
  - Understand how they are added arranged inside the <u>petStore</u> structure.
    - Pay particular attention to the padding and alignment
  - o Code the questions 1-19
    - Restrict your answers to the rules/guidelines presented in code
  - Absolutely no harding coding of values
    - Yes you can see the tests and answers...
      - The goal is to access the answers with C++ code statements.
  - o You should be able to answer those questions by paper first
    - Then verify with the code.
    - Make sure you understand these questions / relationships.

### Validation

Simple checklist to make sure that everything is submitted correctly

- Is the project compiling and running without any errors or warnings?
- Does the project run **ALL** the unit tests execute without crashing?
- Is the submission report filled in and submitted to perforce?
- Follow the verification process for perforce
  - o Is all the code there and compiles "as-is"?
  - No extra files
- Is the project leaking memory?

#### Hints

Most assignments will have hints in a section like this.

- This is pretty easy Basic assignment
  - o It is mainly here to help you single step through your code and understand pointers layouts and access commands.
  - The casting section, allows you to access parts of a complicated structure with casting.
    - Note the data is the same, but the way you access changes.
- I expect this assignment to be completed quickly for most of the students
  - o Please make sure you fully understand this code without a debugger.
  - o Many little lessons here for those who put in the effort.
- Something similar in the exam Enjoy

#### Pointer Test / Keenan

```
Assume that we are working on a LITTLE endian processor
unsigned char data[];
Memory Dump ( values in Hex )
        0x0000: 0xEB, 0xCD, 0x22, 0x4F,
data =
        0x0004: 0x73, 0xB5, 0xF3, 0x35,
        0x0008: 0x23, 0x24, 0x01, 0xFE,
        0x000C: 0xCD, 0xE3, 0x44, 0x85,
        0x0010: 0x66, 0x43, 0x75, 0x33,
        0x0014: 0x39, 0x5C, 0x22, 0x11,
        0x0018: 0x56, 0xA8, 0xAA, 0x13,
        0x001C: 0x64, 0x82, 0x68, 0x26,
unsigned char *p; // char are 8-bits wide
unsigned int *r; // ints are 32-bits wide
unsigned short *s; // shorts are 16-bits wide
p = &data[0];
                             Expected output
printf(%x\n'', *(p+3));
                       1)_____
printf(%x\n", *(p+5));
                        2)_____
p = p + 12;
                       3)_____
printf(%x\n", *(p));
printf(%x\n'', p[2]);
                        4)
printf("%x\n", *p++ );
                        5)____
p += 6;
printf("%x\n", *--p );
                       6)_____
printf(%x\n'', p[5]);
                       7)
p = p + 2;
printf("%x\n", *p++ );
                        8)_____
printf(%x\n", *(p+3));
                       9)_____
p = 5 + p;
printf("%x\n", *(p++));
                       10)_____
printf("%x\n", *(--p)); 11)_____
```

```
0x0000: 0xEB, 0xCD, 0x22, 0x4F,
data =
       0x0004: 0x73, 0xB5, 0xF3, 0x35,
       0x0008: 0x23, 0x24, 0x01, 0xFE,
       0x000C: 0xCD, 0xE3, 0x44, 0x85,
       0x0010: 0x66, 0x43, 0x75, 0x33,
       0x0014: 0x39, 0x5C, 0x22, 0x11,
       0x0018: 0x56, 0xA8, 0xAA, 0x13,
       0x001C: 0x64, 0x82, 0x68, 0x26,
r = (unsigned int *)&data[0]
printf("%x\n", *(r) );
                      12)_____
printf("x\n'', *(r+5));
                      13)
